Tata Power Solar's range of LED lanterns and home lighting systems

Tata Power Solar announced the launch of its latest product line in LED home lighting. With the extended Tata Solar Diva range of lanterns and table lamps (5L, 15L2 and 25L) as well as Tata Solar Venus range of home lighting solutions (15L and 75L), consumers can now enjoy uninterrupted power supply at an affordable cost. This latest improved and diverse range of solar products will be available

from this Diwali at select markets. Gagan Pal, Vice-President Products, Tata Power Solar said, "Tata Solar Diva and Tata Solar Venus will help users in remote locations move away from costly and polluting non-renewable sources, like kerosene, for power." LED lights have an average life span of over 40 times that of CFL lights, and use half the electricity. These new products are easily portable due to

their light weight and ergonomic design, with multiple options including mobile charging facilities. In case of no / low sunlight days, the products can also be charged through AC.
