

# Power system from Tata Power Solar

Tata Power Solar has launched a new 1 KVA solar power pack system to its solar product line-up, called TATA Dynamo. The power pack, a combination of solar PV panels, inverter and battery, will help consumers enjoy uninterrupted power supply for up to 8 hours, at an affordable cost.

TATA Dynamo works like a regular inverter, but has solar as its primary source of power. The intelligent system charges itself while powering all the connected appliances through free solar energy and when sunlight is unavailable it automatically shifts to regular electricity. Depending on the weather conditions, the system can provide back-up of 4 to 8 hours to power appliances like LED/CFL lights, fans, televisions, etc. The system has been designed for simple and faster installation with maintenance-free operation.
