

## **TATA POWER'S SOLAR BACKUP**

Tata Power Solar, an arm of Tata Power, has launched a solar-based electricity backup system for domestic consumers. "The power pack, a combination of solar PV panels, inverter and battery, will help consumers enjoy uninterrupted power supply for up to eight hours at an affordable cost," the company said in a statement. The product called Tata Dynamo works like a regular inverter that uses solar energy as its primary source of power, it said. The system charges itself while powering appliances and automatically shifts to regular electricity when sunlight is unavailable, it added. Depending on weather conditions, the system can provide back-up of four to eight hours for appliances like LED and CFL lights, fans and televisions. The system has been designed for simple and easy installation.
