NEW DELHI

Tata Power Renewable Energy Ltd, a 100% subsidiary of Tata Power Co. Ltd, and Germany-based RWE Renewables GmbH have signed a memorandum of understanding (MoU) to explore the potential of joint development of offshore wind projects in India, according to a joint statement by the two companies.

"India is an unexplored and highly attractive market to develop opportunities for offshore wind as it has a large coastline of about 7,600 kilometres. The MoU between Tata Power Renewable Energy and RWE becomes significant in the light of the Government of India's announcement of achieving 30 gigawatts of offshore wind installations by 2030 to meet the country's growing power demand," according to the statement.

"RWE is the ideal partner to support Tata Power's plans to

enhance the offshore wind business based on its global expertise in running and operating offshore wind projects. In view of the Indian government's heightened focus on offshore wind farms to address the country's expanding electricity demands, the collaboration becomes even more significant," said Praveer Sinha, chief executive officer (CEO) and managing director of Tata Power.

India has excellent wind resources, which can help to meet the country's increasing energy demands, said Sven Utermohlen, CEO, wind offshore, RWE Renewables.

"If clear regulations and an effective tender scheme are in place, we expect India's offshore wind industry to gain real momentum," Utermohlen said.

The partnership comes when the government is conducting detailed technical studies and devising the regulatory framework to establish the first auctions for wind projects off the coasts of Tamil Nadu and Gujarat.

Tata Power, RWE ink pact to explore offshore wind projects

Deal in line with Centre's aim of 30 GW of offshore wind installations by 2030

OUR BUREAU

Mumbai, February 21

Tata Power and German electricity generating company RWE have agreed on a partnership to explore the potential for a joint development of offshore wind projects in India.

A MoU has been signed between Tata Power Renewable Energy, a 100 percent subsidiary of Tata Power which is one of India's largest integrated power companies, and RWE Renewables GmbH, one of the world's leaders in offshore wind.

Identifying potential

Both will conduct technical and commercial site assessments and evaluate Indian offshore wind supply chain and supporting infrastructure, such as ports and grid connections, to identify the local strengths as well as ne-

cessary development potential.

Global expertise

Praveer Sinha, CEO and Managing Director of Tata Power, said: "RWE is our ideal partner to support Tata Power's plans to enhance and grow offshore wind business based on its global expertise in running and operating offshore wind projects."

Unexplored market

The companies state that India is an unexplored and highly attractive market to develop opportunities for offshore wind as it has a large coastline of about 7,600 km.

The MoU becomes significant in the light of the Indian Government's announcement of achieving 30 gigawatts (GW) of offshore wind installations by 2030 to

meet the country's growing power demands.

Clean regulations needed

Sven Utermöhlen, CEO Wind Offshore of RWE Renewables, explains: "If clear regulations and an effective tender scheme are in place, we expect India's offshore wind industry will gain a real momentum. RWE wants to be part of this development."

The RWE Group has more than 120 years' experience of electricity generation. Founded in 1898 as a municipal utility, RWE today is a leading global player in renewables. RWE has developed 17 offshore wind farms in five countries. By 2030, RWE intends to triple its global offshore wind capacity from currently 2.4 GW to 8 GW (capacity represents RWE share only).

RWE and Tata Power have signed a memorandum of understanding (MoU) to explore the potential for joint development of offshore wind projects in India.

The MoU is between offshore wind developer RWE Renewables and Tata Power Renewable Energy Limited, a 100% subsidiary of Tata Power, one of India's largest integrated energy companies.

India is a "new and extremely attractive" market for the development of offshore wind farms with its approximately 7600 km of coastline.

The Indian government has announced a goal of 30GW of offshore wind by 2030 to meet the country's growing energy needs and is conducting detailed technical studies and creating the regulatory framework to conduct the first auctions for offshore wind off the coasts of Tamil Nadu and Gujarat.

To enable the establishment of an offshore wind market in India, RWE and Tata Power Renewable Energy will carry out technical and commercial site analyses.

In addition, the companies will carry out an assessment of India's offshore wind supply chain and supporting infrastructure, such as ports and grid connections, to identify local strengths and necessary development potential.

Tata Power CEO and managing director Praveer Sinha said: "With its global expertise in the realisation and operation of offshore wind projects, RWE is our

The partnership aims to establish a competitive offshore wind market in India

Tata Power on Monday said it has collaborated with Germany-based RWE Renewable GmbH to explore potential for a joint development of offshore wind projects in India.

A corresponding Memorandum of Understanding (MoU) has been signed between Tata Power Renewable Energy Limited, a 100 per cent subsidiary of Tata Power, which is one of India's largest integrated power companies, and RWE Renewables GmbH, one of the world's leaders in offshore wind, a Tata Power statement has said.

India is an unexplored and highly attractive market to develop opportunities for offshore wind as it has a large coastline of about 7,600 km.

The MoU between Tata Power Renewable Energy and RWE becomes significant in the light of the Central government's announcement of achieving 30 gigawatts (GW) of offshore wind installations by 2030 to meet the country's growing power demands, it added.

RWE and Tata Power Renewable Energy possess complementary strengths and will enable the establishment of a competitive offshore wind market in India.

Praveer Sinha, CEO and Managing Director of Tata Power, said in the statement, "RWE is our ideal partner to support Tata Power's plans to enhance and grow offshore wind business based on its global expertise in running and operating offshore wind projects. In view of the Indian Government's heightened focus on offshore wind farms to address the country's expanding electricity demands, the collaboration becomes even more significant."

Sven Utermohlen, CEO Wind Offshore of RWE Renewables, explains in the statement: "India has excellent wind resources, which can help to meet the country's increasing energy demands. If clear regulations and an effective tender scheme are in place, we expect India's offshore wind industry will gain a real momentum. RWE wants to be part of this development."

Utermohlen added: "With Tata Power we have an outstanding and experienced partner at our side which is deeply rooted locally and shares our ambition to drive the growth of offshore wind in India. Combined with RWE's 20 years' track record in developing, constructing and operating offshore wind projects, we are well placed to supply green energy from offshore wind as competitively as possible for the Indian society."

The government is in the process of conducting detailed technical studies and devising the regulatory framework to establish the first auctions for offshore wind of the coast of Tamil Nadu and Gujarat. Offshore wind has the potential to spur significant infrastructure investment in these states and to support local job creation.

KEY POINTS

- While India has a well-developed onshore wind sector, there are no operational offshore wind farms in its waters.
- Authorities there have said they want 30 gigawatts of offshore wind installations by the year 2030.
- In a speech last week, India's Prime Minister Narendra Modi said the energy requirements of the country's population were "expected to nearly double in the next twenty years."

RWE and Tata Power collaborate to explore potential for development of offshore wind projects in India

🕒 February 21, 2022 🧑 reve

RWE and Tata Power have agreed on a partnership to explore the potential for a joint development of offshore wind projects in India. A corresponding Memorandum of Understanding (MoU) has been signed between Tata Power Renewable Energy Limited, a 100 per-cent subsidiary of Tata Power, which is one of India's largest integrated power companies, and RWE Renewables GmbH, one of the world's leaders in offshore wind.

India is an unexplored and highly attractive market to develop opportunities for offshore wind as it has a large coastline of about 7,600 kilometres. The MoU between Tata Power Renewable Energy Limited and RWE becomes significant in the light of the Government of India's announcement of achieving 30 gigawatts (GW) of offshore wind installations by 2030 to meet the country's growing power demands.

RWE and Tata Power Renewable Energy Limited possess complementary strengths and will enable the establishment of a competitive offshore wind market in India. Talking about the collaboration, Dr Praveer Sinha, CEO and Managing Director of Tata Power, says: "RWE is our ideal partner to support Tata Power's plans to enhance and grow offshore wind business based on its global expertise in running and operating offshore wind projects. In view of the Indian Government's heightened focus on offshore wind farms to address

RWE Renewables and India's integrated power company Tata Power have entered into a partnership to explore the potential for a joint development of offshore wind projects in India.

The partnership was forged after Tata Power Renewable Energy Limited, a wholly owned subsidiary of Tata Power, and RWE Renewables GmbH signed a Memorandum of Understanding (MoU), which the two companies deem significant in the light of the Government of India's announcement of targeting 30 GW of installed offshore wind capacity by 2030.

The Indian Government is in the process of conducting detailed technical studies and devising **the regulatory framework to establish the first auctions** for wind farms off the coasts of Tamil Nadu and Gujarat, RWE and Tata Power said, adding that offshore wind has the potential to spur significant infrastructure investment in these states and to support local job creation.

According to RWE's press release from 21 February, the new partners **will perform technical and commercial site assessments** to facilitate the establishment of an offshore wind market in India and are looking into an **evaluation of the domestic offshore wind supply chain** and supporting infrastructure, such as ports and grid connections, to identify the local strengths as well as necessary development potential.

*"India has excellent wind resources, which can help to meet the country's increasing energy demands. If clear regulations and an effective tender scheme are in place, we expect India's offshore wind industry will gain a real momentum. RWE wants to be part of this development", said **Sven Utermöhlen**, CEO Wind Offshore of RWE Renewables.*

According to the World Bank, India has 112 GW of bottom-fixed and 83 GW of floating offshore wind potential, with best opportunities located in Tamil Nadu and Gujarat.

The country has made the news with its offshore wind plans more than a few times over the past several years. However, India has been slow in reaching the development stage, even though it had set an offshore

Tata Power joins hands with German RWE to explore wind energy potential

To facilitate the establishment of an offshore wind market in India, RWE and Tata Power Renewable Energy Limited will conduct technical and commercial site assessments.

ETEnergyWorld • February 21, 2022, 14:50 IST

New Delhi: **Tata Power** and German multinational energy giant **RWE** announced they have agreed on a partnership to explore the potential for joint development of **offshore wind** energy projects in India.

Under the partnership, a Memorandum of Understanding (MoU) has been signed between Tata Power **Renewable** Energy

Ltd, a 100 per cent subsidiary of Tata Power, and RWE Renewables GmbH, one of the world's leaders in offshore **wind energy** technology.

"RWE is our ideal partner to support Tata Power's plans to enhance and grow offshore wind business based on its global expertise in running and operating offshore wind projects," said **Praveer Sinha**, CEO and Managing Director of Tata Power, adding the collaboration becomes significant in view of the government's focus on offshore wind farms to address expanding electricity demand.

"India has excellent wind resources, which can help to meet the country's increasing energy demands. If clear regulations and an effective tender scheme are in place, we expect India's offshore wind industry will gain a real momentum. RWE wants to be part of this development," said Sven Utermöhlen, CEO Wind

The partnership is expected to help establish a competitive offshore wind market in India.

Germany-based energy firm RWE has [partnered](#) with Indian electric utility company Tata Power to explore the potential to jointly develop offshore wind projects in India.

Tata Power subsidiary Tata Power Renewable Energy signed a memorandum of understanding (MoU) with RWE Renewables, RWE's renewable energy business, for the partnership.

The collaboration comes after the Indian Government set a target of installing 30GW of offshore wind power capacity by 2030 to meet the country's growing energy demand.

Tata Power managing director and CEO Dr Praveer Sinha said: "RWE is our ideal partner to support Tata Power's plans to enhance and grow offshore wind business based on its global expertise in running and operating offshore wind projects.

"In view of the Indian Government's heightened focus on offshore wind farms to address the country's expanding electricity demands, the collaboration becomes even more significant."

The two companies' partnership is expected to help establish a competitive offshore wind market in India, whose coastline measures around 7,600km in total.

The Indian Government is conducting detailed technical studies and establishing a regulatory framework to organise auctions for offshore wind areas off the coasts of
